SUMMARY

I'm a cloud architect and software engineer with 13+ years of experience building products and running them in production. I founded Eleva and lead architecture and development for Liquor Cart at Electronic Payments. My work combines C#/.NET and Angular development with AWS architecture, production operations and technical leadership.

CAREER HIGHLIGHTS

- Founded **Eleva in 2017** to help schools run consistent staff evaluations. Built and still operate the SaaS platform, which won **Startup Chile Ignite in 2022**.
- Led the replacement of a legacy commerce platform with **Liquor Cart**, connecting an AWS storefront with stores' existing registers. The business can now run online and in-store commerce through one connected system.
- Built Eleva's deployment pipelines to make releases repeatable. The platform completed **19 production deployments in a 30-day period without failures**, with changes live in **about nine minutes**.

PROFESSIONAL EXPERIENCE

Lead Software Architect and Full-Stack Engineer, Electronic Payments

Feb 2024 – Present | Contract | Remote

- The replacement platform had to work with stores' existing on-premise registers. Designed its integration with Magento on AWS and wrote **approximately 90% of the C# middleware**, allowing paid online orders to flow into those registers.
- Built a recovery workflow for orders and payments that fall out of sync. It can complete or cancel orders, void or refund payments, and escalate unresolved cases to an operator. Idempotent processing allows retries without repeating payment actions.
- Kept store integrations separate through dedicated RabbitMQ virtual hosts and automated their setup and removal. Added message retries and an error queue that operators can replay, giving failed integrations a defined recovery path.
- Replaced manual deployments with infrastructure defined in CDK and automated pipelines across dev, QA and production AWS accounts. The team now follows a consistent release process, with approval required before changes reach production.
- Established development conventions and mentored junior engineers to give a **six-person team** a consistent way to deliver changes. The project reached 178 merged pull requests, with **1,600+ unit tests on every push**.

Founder and Platform Architect, Eleva

2017 – Present | Viña del Mar, Chile · Remote

- Built Eleva so schools could evaluate staff using consistent, auditable rules and plan improvements. Versioned rubrics preserve the criteria behind each result, and weighted 360-degree scoring adjusts for missing evaluators while each school's data stays separate.
- Defined dev, QA and production in a shared CDK stack with environment-specific configuration. New environments can be added through a pull request, and automated releases include ECS rollback when a deployment fails.

- Built an operations panel so infrastructure reviews could use the system's deployed state. Reviewers can see architecture and configuration drift from CloudFormation, then trace each release to its source code through commit-tagged images.
- Designed the .NET application to tolerate scheduled shutdowns, then configured ECS and RDS to stop on weekday evenings and restart on request. This avoids leaving compute resources running through idle periods.

EARLIER EXPERIENCE

Senior Full-Stack Software Engineer, GRUBBRR
Apr 2022 – Aug 2023 | Contract | Remote, USA

- Worked on the C#/.NET Core backend of a self-service kiosk platform, from requirements through production troubleshooting. Built the Angular 13 frontend for the Clover SMB product.

Software Engineer, Freelance
Jan 2014 – Jul 2020 | Full-time | Remote

- Helped clients launch MVPs by building their applications and AWS infrastructure, using Angular, React, Node.js, .NET Core and Java.

PHP Full-Stack Developer, Centro Científico Tecnológico de Valparaíso
Feb 2013 – Jul 2014 | Part-time | On-site

- Worked on SQL databases and PHP/ORM code for research tools at CCTVal, a scientific computing center.

EDUCATION

Bachelor's Degree in Computer Systems Engineering
Ingeniería de Ejecución en Sistemas Computacionales — Universidad Técnica Federico Santa María (UTFSM), Valparaíso, Chile

SKILLS

Cloud: AWS (ECS Fargate, RDS, Aurora, FSx, S3, CloudFront, API Gateway, ElastiCache, Amazon MQ, CloudFormation), CDK, cdk-nag, Projen, Docker, infrastructure as code

Development: C#, .NET (Core to 9), Angular (2–19), RxJS, TypeScript, React, Node.js, NestJS, Java (JEE, Spring Boot), PHP, GraphQL, gRPC, REST, MassTransit, Marten, EF Core, Polly, YARP

Architecture and data: Event-driven systems, event sourcing, CQRS, sagas, domain-driven design, transactional outbox, modular monoliths and microservices, multitenancy, hybrid cloud, distributed systems, PostgreSQL, MySQL, Cosmos DB, Redis, OpenSearch, RabbitMQ, SymmetricDS

Delivery and operations: CI/CD, environment parity, drift detection, approval gates, scheduled power-down, OpenTelemetry, Playwright, xUnit, Jest, Veracode scans

Commerce: Magento 2.4, Hyvä, Tailwind, custom checkout, POS integration, DoorDash, TokenEx, RapidConnect, KMS envelope encryption, regulated-category compliance (OHLQ)

LANGUAGES

Spanish (native) · English (professional working proficiency)
