Diego Palominos

Cloud Architect & Software Engineer

diego@eleva.school | diegopalominos.dev | www.linkedin.com/in/diego-palominos/ | github.com/betterjam | Viña del Mar, Chile · Remote worldwide

SUMMARY

Hands-on Software Architect and Engineer with 13+ years of experience designing, building, and operating production systems. Founded and built Eleva, a multi-tenant SaaS platform developed end-to-end, from business workflows and application architecture to AWS infrastructure and automated delivery. At Electronic Payments, designed distributed, event-driven systems and introduced engineering practices that improved deployment reliability, auditability, and consistency across environments. I combine deep software engineering expertise with architectural ownership and a strong focus on delivering reliable systems that solve real business problems.

CAREER HIGHLIGHTS

- **Built a complete SaaS product:** founded Eleva and took it from idea to production as its sole architect and engineer, from business workflows to AWS operations. It won **Start-Up Chile Ignite (Generation 4) in 2022**.
- **Architected a distributed commerce system:** designed Liquor Cart's event-driven integration between an AWS storefront and stores' on-premise registers, letting the business run online and in-store sales as one system.
- **Changed how a company ships software:** introduced Electronic Payments' first CI/CD pipelines and environment parity from local to production. The resulting patterns became references reused by other projects.

PROFESSIONAL EXPERIENCE

Lead Software Architect, Electronic Payments

Feb 2024 – Present | Contract | Remote

- Designed Liquor Cart as a **distributed, event-driven POS integration** using domain-driven design. Services exchange messages over RabbitMQ so paid online orders reach stores' on-premise registers in real time.
- Introduced **event sourcing with Marten**, making the event store the source of truth for the catalog. Every business event is preserved, so product and price changes can be traced and audited.
- Built the AWS middleware coordinating cloud services, existing POS systems and the Magento storefront, writing **about 90% of the C# code**. A dedicated RabbitMQ virtual host per store contains failures to one store.
- Designed payment recovery for orders and payments that fall out of sync. Idempotent steps complete or cancel orders, void or refund payments, and escalate unresolved cases; retries and a replayable error queue cover the rest.
- Introduced the **company's first CI/CD pipelines**, with CDK-defined infrastructure and parity across local, Dev, QA and Production. Releases became reproducible and consistent, with approval required before production.
- These architectures and pipelines became **reference implementations reused by other projects**. Set engineering conventions and mentored a **six-person team**: 178 merged pull requests, 1,600+ unit tests on every push.

Founder and Platform Architect, Eleva
2017 – Present | Own company, alongside contract roles | Viña del Mar, Chile · Remote

- **Designed, built and took to production the entire SaaS platform**: frontend, backend, data model, AWS architecture, infrastructure, automation and operations. Eleva digitizes performance evaluation for schools.
- Automates 360-degree evaluations with versioned rubrics that preserve the criteria behind each result, per-school multitenancy, access controls, evidence management, and traceable, reproducible evaluation processes.
- Defined AWS infrastructure as code (CDK) with reproducible dev, QA and production environments and CI/CD with automatic ECS rollback: **19 production deployments in 30 days without failures**, each live in **about nine minutes**.
- Keeps operating costs under control: the .NET application tolerates scheduled shutdowns, so ECS and RDS stop outside school hours. An operations panel shows configuration drift and traces each release to its commit.
- Won **Start-Up Chile Ignite (Generation 4, 2022)**, which funded the move from prototype to product.

EARLIER EXPERIENCE

Senior Full-Stack Software Engineer, GRUBBRR
Apr 2022 – Aug 2023 | Contract | Remote, USA

- Worked on the C#/.NET Core backend of a self-service kiosk platform, from requirements through production troubleshooting. Built the Angular 13 frontend for the Clover SMB product.

Software Engineer, Freelance
Jan 2014 – Jul 2020 | Full-time | Remote

- Helped clients launch MVPs by building their applications and AWS infrastructure, using Angular, React, Node.js, .NET Core and Java.

PHP Full-Stack Developer, Centro Científico Tecnológico de Valparaíso
Feb 2013 – Jul 2014 | Part-time | On-site

- Worked on SQL databases and PHP/ORM code for research tools at CCTVal, a scientific computing center.

EDUCATION

Bachelor's Degree in Computer Systems Engineering
Ingeniería de Ejecución en Sistemas Computacionales — Universidad Técnica Federico Santa María (UTFSM), Valparaíso, Chile

SKILLS

Languages and frameworks: C#, .NET (Core to 9), TypeScript, Angular (2–19), RxJS, Node.js, React, MassTransit, Marten, EF Core

Cloud and delivery: AWS (ECS Fargate, RDS, Aurora, S3, CloudFront, API Gateway, Amazon MQ, CloudFormation), CDK, Infrastructure as Code, CI/CD, Docker, environment parity, OpenTelemetry

Architecture: Distributed systems, Domain-Driven Design, Event-Driven Architecture, Event Sourcing, CQRS, sagas, transactional outbox, idempotency, multitenancy, hybrid cloud

Data and messaging: PostgreSQL, RabbitMQ, Redis, OpenSearch, SymmetricDS

Quality and commerce: xUnit, Playwright, Jest, Magento 2.4, POS integration, payment gateways (TokenEx, RapidConnect)

LANGUAGES

Spanish (native) · English (professional working proficiency)
